Hyperlocal Retail Marketplace

Business Analysis Portfolio Brief | UTC / La Jolla, San Diego

Concept: Multi-category local shopping with one checkout across participating retailers and delivery of retailer-prepared packages.

Evidence: Proposed concept. Order data is synthetic; retailer names are prospects only. No partnerships or live operations are claimed.

Business opportunity

Customers may struggle to discover locally available products across stores and coordinate rapid delivery. The proposed platform combines local product discovery, retailer-confirmed inventory, multi-store checkout, prepared packages and coordinated delivery. Drivers collect prepared packages rather than shopping for items.

Proposed pilot operating model

• Customer searches by product, category, store or map.

• Retailer confirms inventory and accepts its sub-order.

• Retailer staff prepare and label packages.

• Dispatch offers a route with payout, stops, distance and estimated time visible.

• Partner chooses whether to accept; delivery and proof are recorded.

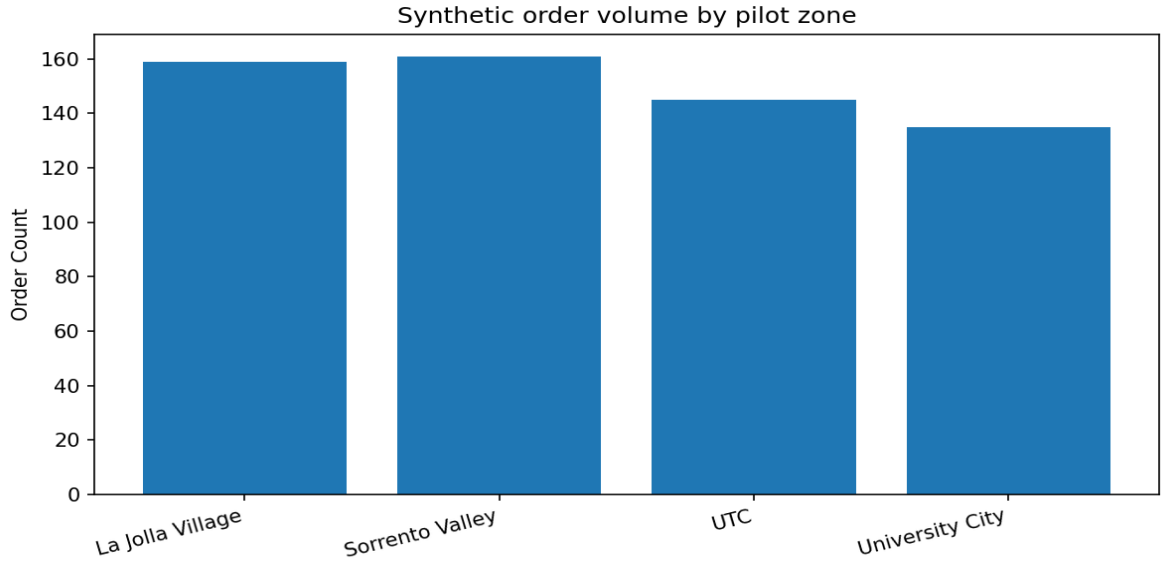

• Marketplace payment provider supports retailer settlement, partner payouts and refunds.

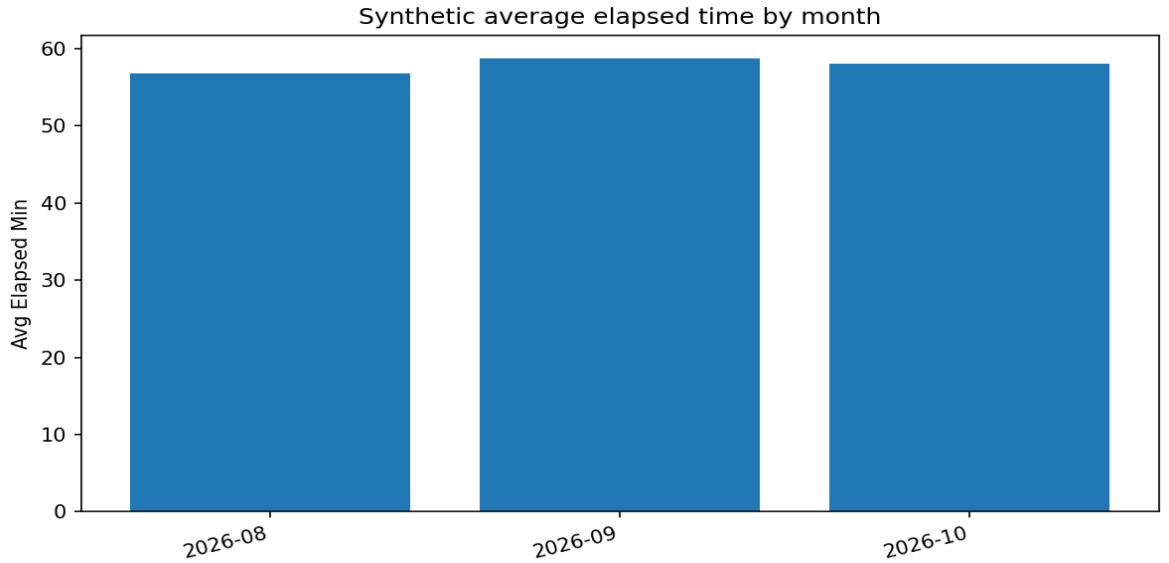

Pilot KPIs

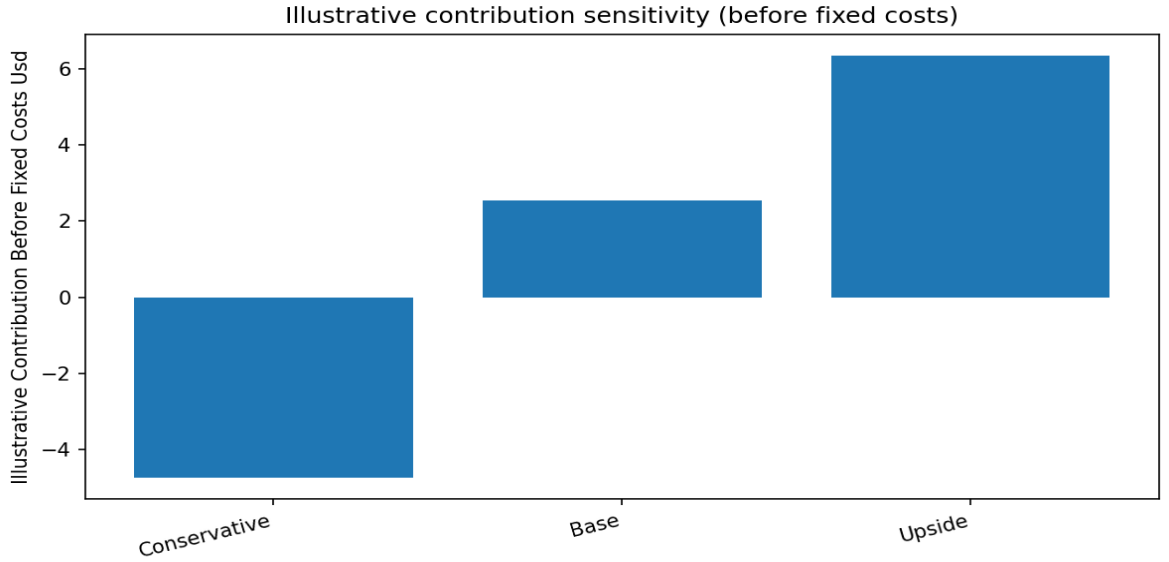

KPI	Purpose
Order completion rate	End-to-end reliability
Inventory accuracy	Reduce cancellations and trust loss
Preparation / wait time	Find retailer bottlenecks
On-time delivery	Validate service promise
Partner earnings per active hour	Validate partner value proposition
Contribution per order	Test economics before fixed costs

Illustrative pricing hypotheses

Item	Proposed assumption
Standard same-day	$6.99 starting fee
Express target	$10.99 starting fee; <=60 minutes only when feasible
Additional retailer stop	+$2.50 customer-facing supplement
Membership	$5.99/month; proposed 14-day trial
Partner compensation	Base + time + distance + stops + verified waiting; final rates TBD

Recommendation

Run a controlled pilot with a small cohort of willing retailers and a limited partner pool. Only include stores that can reliably confirm inventory and prepare packages. Cap route complexity and operating hours. Measure completion, readiness, delivery performance, partner earnings, refunds, repeat use and contribution before expanding.

Contribution estimates exclude taxes, fixed overhead, support labor, insurance, chargebacks, marketing and other costs. They are not profit or validated forecasts.
